Q&A

TRAINING AIMS

The objective of this training is to:

- Present and define what is a Purchase Info Record in SAP
- Learn how to create and maintain the PIR
- Be able to distinguish the difference between PIR and Source list
- Help you get an idea before using the two terms in SAP.

TARGETED AUDIENCE

This training is for:

- Viseo collaborators / functional consultants
- Without distinction of rank
- however, the audience particularly targeted is that of "beginners" / "junior consultants" / new hires"

Source List VS PIR

Info record- Definition & Creation method

Further Information

Technical

Q&A

Source List VS PIR

Comparison

Source List

- The Source List identifies the sources of a material that can be used for a plant within a predefined period. The sources in the source list are defined by means of a source list record.

Purchase Info Record

- The combined information of material and vendor altogether is kept in a record that we call as purchase info record.

You create info records when you need to purchase new materials or existing materials from a new vendor, whereas source lists display the vendors that are to sell you a particular material throughout a particular validity period. They are simply listings of available sources of supply for a material that can be either internal or external (vendors or plants). It indicates the periods during which procurement from such sources is possible.

Source List VS PIR

Comparison

Source List

•If the system doesn't find a quota arrangement for a material, then the system checks the entries in the source list. If there is a single one preferred vendor for a source, then the system selects that vendor as a source. If there is main vendors on the source list, then the system lets the buyer select the vendor he wants.

Purchase Info Record

•If there is no valid source list, then the system checks the contracts, agreements and material records. After the system checks, it provides a list from which the buyer selects the vendor.

These are the different source determination procedures, that we should add to the quota arrangement

Q&A

Info Record – Definition & Creation method

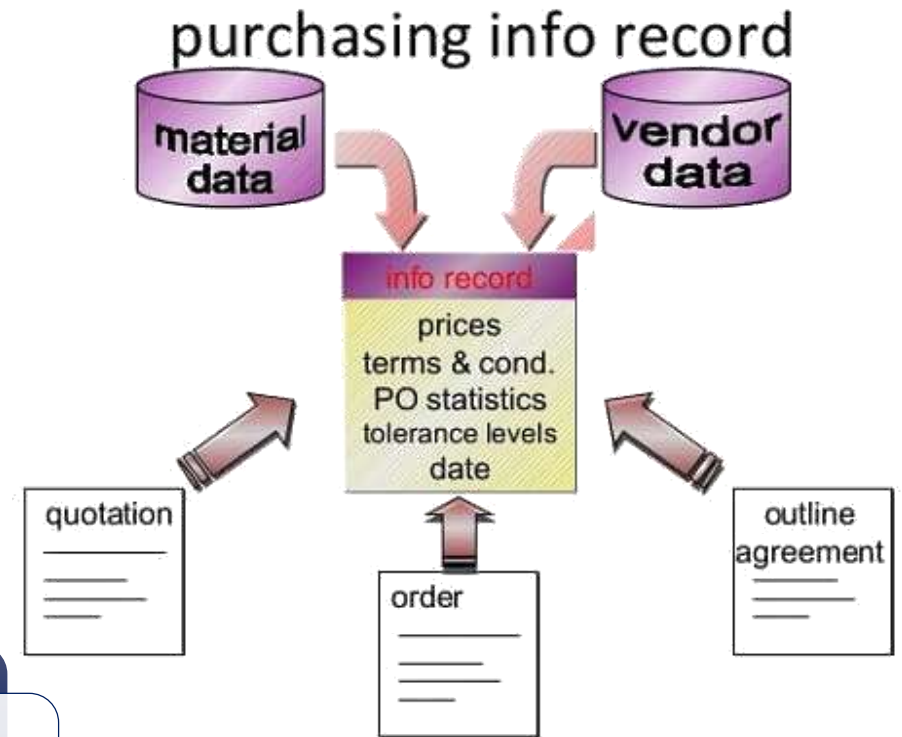

Purchase Info Record presentation

Material and vendor master are separate data records for keeping information of materials and vendors from where material is procured. The combined information of material and vendor altogether is kept in a record that we call as purchase info record. The key points about purchase info record are as follows:

stores information on material and vendor, supplying that material. For example, a vendor's current price of a particular material is stored in info record.

can be maintained at the plant level or at the purchasing organization level

can be maintained for four procurement types (next slide)

Info Record – Definition & Creation method

PIR presentation

PIR can be maintained for four procurement types, which are as follows:

Standard

- Standard info record has information on standard orders (orders include details of vendor and material). This info record will include vendors price for supplying the particular material.

Subcontracting

- Subcontracting info record has information on subcontract orders. This info record will include price for assembling the raw material that is supplied by the ordering party.

Pipeline

- Pipeline info record has information on material that is provided by vendor through pipes. For Example: like water,electricity.

Consignment

- Consignment info record has information on material that is kept at ordering party premises. This info record contains vendors price that is to be paid for withdrawing material from consignment stock.

Info Record – Definition & Creation method

PREREQUISITES FOR CREATING A PIR

Purchase info records are information about terms for purchasing a specific material from a vendor. They are maintained at vendor/material combination and can contain data for pricing and conditions, overdelivering and underdelivering limits, planned delivery date, availability period.

Material Number

Before Creating a PIR, The material number of the material master record should be known

Manufacturer Material Number

Before ordering a material that has a MPN, you must know its MPN material number.

Vendor Number

You should also know the number on the Number on the vendor master record

Organizational level

If the PIR is for a particular purchasing organization or plant, then the code specific to those is required.

Info Record – Definition & Creation method

Creation of Purchase Info Record

❑ Path to create Info Record

Logistics ⇒ Material Management ⇒ Purchasing ⇒ Master Data ⇒ Info Record ⇒ Create

❑ TCode: **ME11**

❑ You can also create a PIR either manually or automatically by setting the info Update indicator when maintaining a quotation, a PO or an agreement.

Info Record – Definition & Creation method

Creation of Purchase Info Record

Step 1 – On the SAP Menu screen, select the Create icon, by following the above path..

Step 2 Enter the vendor number. In the info category, select standard or subcontracting, or pipeline or consignment, according to the requirement.

Step 3 – Fill in the required details such as material group, 1st/2nd/3rd reminder, vendor material number, personal details, order unit, origin data, and sort term.

On the SAP Menu screen, select the Create icon, by following the above path...

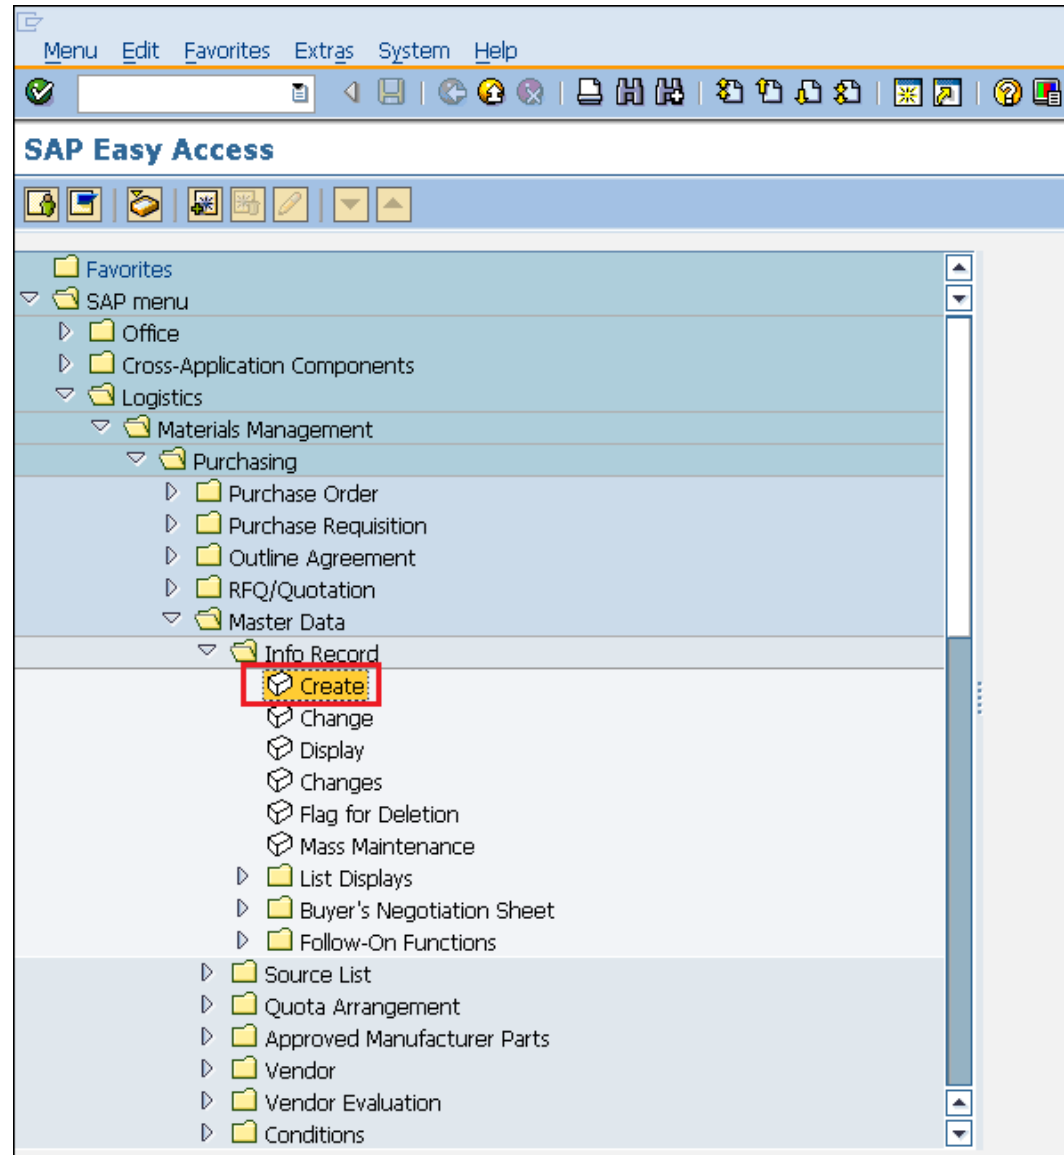

Enter the vendor number. In the info category, select standard or subcontracting, or pipeline or consignment, according to the requirement

. Fill in the required details such as material group, vendor material number, personal details, order unit

Further Information

Overview of SAP MM module

Source List position in a MM process

- ❑ MRP: Determine requirements raised for a material from planning or manually by buyer.
- ❑ Source Determination: Determine list of suppliers based on previous transaction history or long term agreements available in system and request quotes from them.
- ❑ Vendor Selection: Compare quotes from all suppliers and select most suitable one for the requirement.
- ❑ Procurement of Goods/Services: Create contracts with the selected supplier and raise Purchase Order (PO) and send to supplier.
- ❑ Goods Receipt and Inventory Management: Receive goods/services and create Goods Receipt transaction against. Invoice verification and Payments to Supplier.

Futher Information

Overview of SAP MM module

- To search the source , you should follow this order of priority:

- ☐ Quota arrangement – Quota arrangement helps to automatically identify the vendor and allocate the quantities to the vendor
- ☐ Source List
- ☐ Purchasing Info record/outline agreement – It is created for the combination of material, vendor and purchase organization.

Q&A

1. Which one of the following is false for Purchase Info Records?
 - A. PIR identifies the sources of a material that can be used for a plant within a predefined period.
 - B. PIR is the combined information of material and vendor altogether
 - C. PIR is created to purchase new materials or existing materials from a new vendor
 - D. If there is no valid source list, then the system checks the contracts, agreements and material records. After the system checks, it provides a list from which the buyer selects the vendor.

2. PIR can be maintained for 4 procurement types. Identify the incorrect procurement type for PIR.
 - A. Standard
 - B. Contracting
 - C. Pipeline
 - D. Consignment

3. Which of the following are prerequisites for PIR?

- A. Purchase Order, Manufacturer Material Number, Vendor Number, Organisation Level
- B. Purchase Requisite, Material, Vendor Number, Organisation Level
- C. Material, Manufacturer Material Number, Vendor Number, Company Code
- D. Material, Manufacturer Material Number, Vendor Number, Organisation Level

4. What is the transaction to create PIR?

- A. ME11
- B. ME22N
- C. ME59N
- D. FK01

5. PIR falls under which MM module?

- A. Inventory
- B. Purchasing
- C. Master Data
- D. MRP

6. Which of the following flow is the correct one?

- A. Requirement Determination > Source Determination > Vendor Selection > PO processing > Goods receipt > Invoice processing > Payments processing
- B. Source Determination > Vendor Selection > Requirement Determination > PO processing > Goods receipt > Invoice processing > Payments processing
- C. Requirement Determination > Vendor Selection > Source Determination > PO processing > Goods receipt > Invoice processing > Payments processing
- D. Vendor Selection > Requirement Determination > Source Determination > PO processing > Goods receipt > Invoice processing > Payments processing

7. What is the table for Purchasing Info Records general data ?

- A. EINA
- B. EKKO
- C. EKPO
- D. EINE

8. What is the table for PIR organisational data?

- A. EINA
- B. EKKO
- C. EKPO
- D. EINE

9. What can BAPI_INFORECORD_GETLIST do ?

- A. Create Purchase Info Record list
- B. Update Purchase Info Record list
- C. Delete Purchase Info Record list
- D. Display Purchase Info Record list

10. Which BAPI can be used to update PIR?

- A. ME_INFORECORD_MAINTAIN
- B. ME_MAINTAIN_INFORECORD
- C. BAPI_INFORECORD_GETLIST
- D. BAPI_INFORECORD_MAINTAIN

1. Which one of the following is false for Purchase Info Records?
