- **What is STO?**
 - **Stock Transfer Between Plants in One Step**
 - **Stock Transfer Between Plants in Two Steps**
 - **Stock Transfer Cross company with Delivery and Billing Document/Invoice**

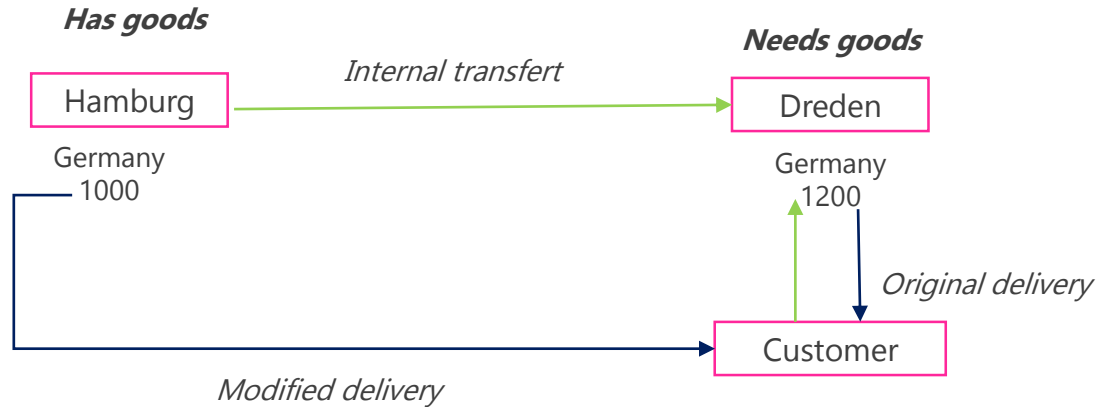

■ What is STO?

What is STO?

Definition:

A purchase order used to request or instruct a plant to transport material from one plant to another within the same corporate enterprise. ... The system supports intra-company code and cross-company code stock transport orders.

- 
- **Stock Transfer Intra-Company in One Step**

Stock Transfer Intra-Company in One Step

Prerequisites:

- Plants should belong to the same company code
- No need for logistics: shipping, goods issue, goods receipt should be handled implicitly.
- This process is instantaneous
- No stock in transit

Definition:

- In the inter-plant transfer flow a plant places an order with a plant of the same company.
- There is no notion of invoicing, but that the physical flow
- As in the intercompany transfer, an outbound delivery is created on the basis of the purchasing document and the receipt of goods is made on the basis of the same delivery.

Stock Transfer Intra-Company in One Step

Process overview

Stock Transfer Intra-Company in One Step

Order type customizing:

- A dedicated type of purchasing document is required.
- It only authorizes physical transfers using items categories specific to shipping management.
- The particularity of UB order is that it does not require you to enter a supplier in the header, but the issuing (supplying) division.

Stock Transfer Intra-Company in One Step

Order type UB customizing:

Stock Transfer Intra-Company in One Step

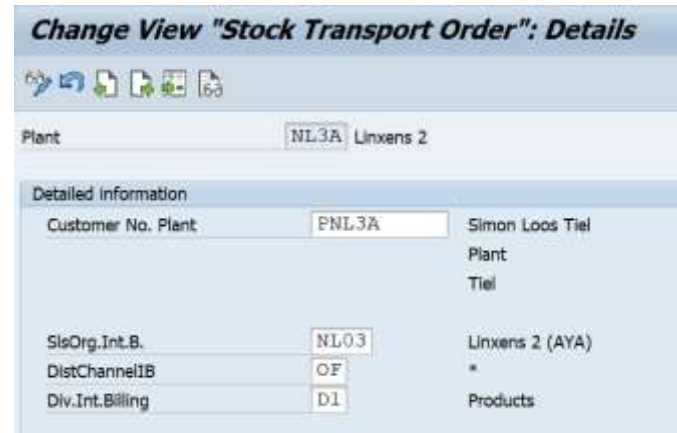

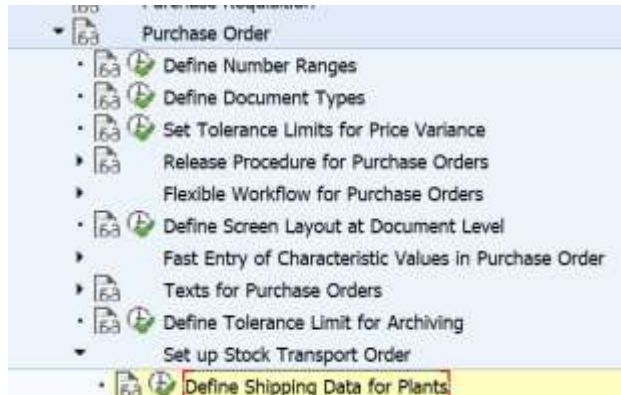

Define shipping data for plants:

For each division created in SAP, it is possible to assign specific data to transfer orders.

The plant customer: if the plant in the stock transport order is the receiving plant, the outbound delivery will be made for this customer.

The sales area: The outbound delivery for a transfer must like any other delivery for a customer be assigned to a sales area.

In the example, NL3A plant is linked to the PNL3A customer plant in the sales area FR03/OF/D1

Stock Transfer Intra-Company in One Step

Assign delivery type & checking rules:

This configuration point is used to assign for a type of purchasing document / issuing division pair:

The type of availability check

The type of outbound delivery

- ▼  Purchase Order
 -  Define Number Ranges
 -  Define Document Types
 -  Set Tolerance Limits for Price Variance
 - ▶  Release Procedure for Purchase Orders
 -  Define Screen Layout at Document Level
 - ▶  Texts for Purchase Orders
 -  Define Tolerance Limit for Archiving
- ▼  Set up Stock Transport Order
 -  Define Shipping Data for Plants
 -  Create Checking Rule

UB	Stock Transp. Order	NL3A	Linxsens 2	NL

Stock Transfer Intra-Company in One Step

Assign document type:

This point of customizing is used to assign the default document type for a supplying / receiving division pair. It is also possible to activate the one-step procedure.

Goods issue automatically generates the goods receipt in the receiving plant.
It is also possible to activate the management of tolerances for incomplete deliveries

Stock Transfer Intra-Company in One Step

Customizing SD document:

On the SD side, the settings can be found in the same customizing points as for classic sales documents:

- **Sales documents:** delivery type,, item category and schedule lines
- **Shipping:** define items categories in delivery

Stock Transfer Intra-Company in One Step

Delivery type :

The delivery type for intra-company transfers follows the same rules as for other outbound deliveries.

As there is no sales order, SAP uses the Order / Default Type associated with it to generate the delivery via the copy Control.

Delivery Item categories determination:

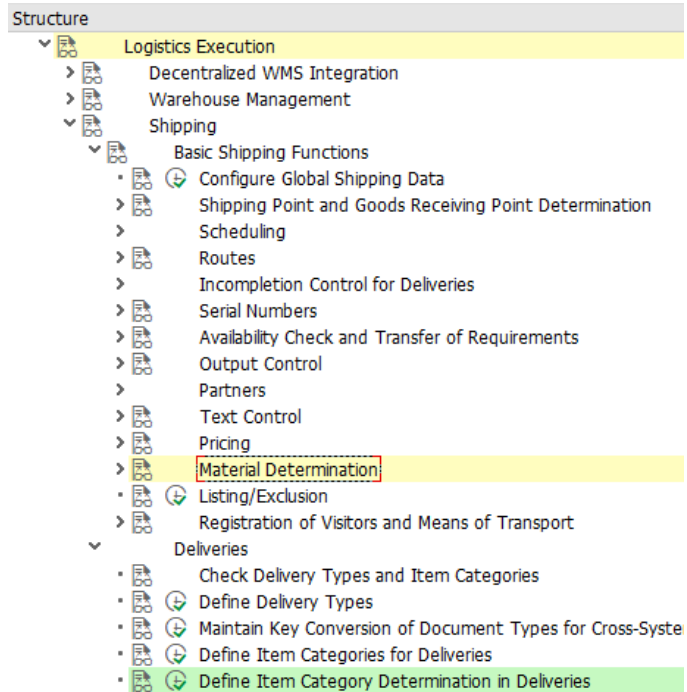

As in sales documents, the item type is determined based on the document type (here delivery) and the item type group of the item.

In the case of the stock transport order, the determination is made using the use case V specifically defined in SAP

Stock Transfer Intra-Company in One Step

Flow: Good issue & Good receipt

Once the delivery has been created and the goods issue has been processed, the flow is completed for the supplying plant.

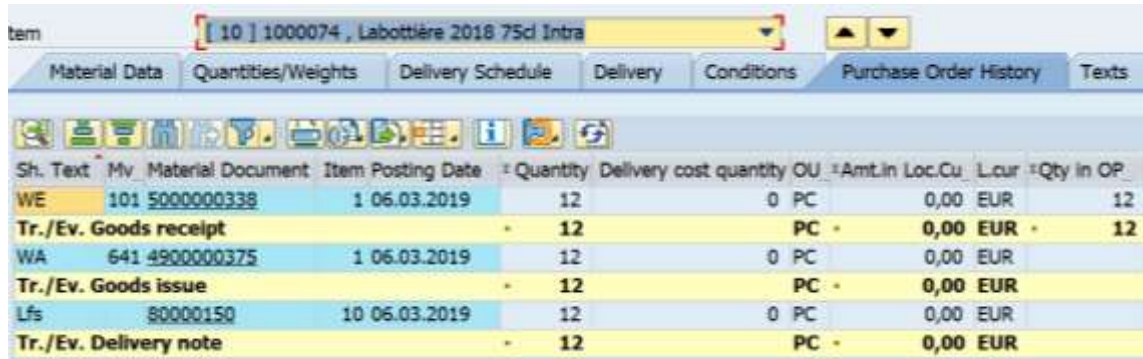

The goods receipt is posted in the receiving plant at the same time as the goods issue posted from the supplying plant.

Stock Transfer Intra-Company in One Step

Documents flow

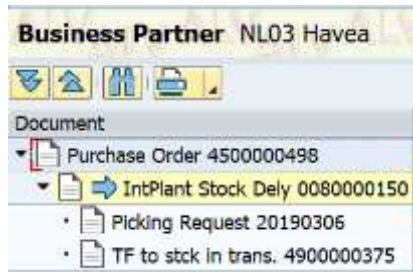

In the history of the transfer order are available documents below:

- The delivery (SD side): generated through VL10B transaction
- The Good issue document (SD side)
- The goods receipt document (MM side)

The screenshot shows the SAP Stock Transfer Order history table. The table has columns for Sh. Text, Mv, Material Document, Item Posting Date, Quantity, Delivery cost quantity, OU, Amt, Loc, Cu, Lcur, and Qty in OP. The data is organized into rows for different documents and their types.

Sh. Text	Mv	Material Document	Item Posting Date	Quantity	Delivery cost quantity	OU	Amt	Loc	Cu	Lcur	Qty in OP

Stock Transfer Intra-Company in One Step

Documents flow using inbound delivery

The stock transfer Intra-Company could be set up with an inbound delivery. Good receipt is performed in reference to the inbound delivery

Stock Transfer Intra-Company in One Step

To remember

In the inter-plant transfer flow a plant places an order with a plant of the same company

Order type : **UB**

Supplier: **Supplying plant**

Plant: **receiving plant**

Outbound delivery creation

Good issue movement: **641**

Good receipt movement: **101**

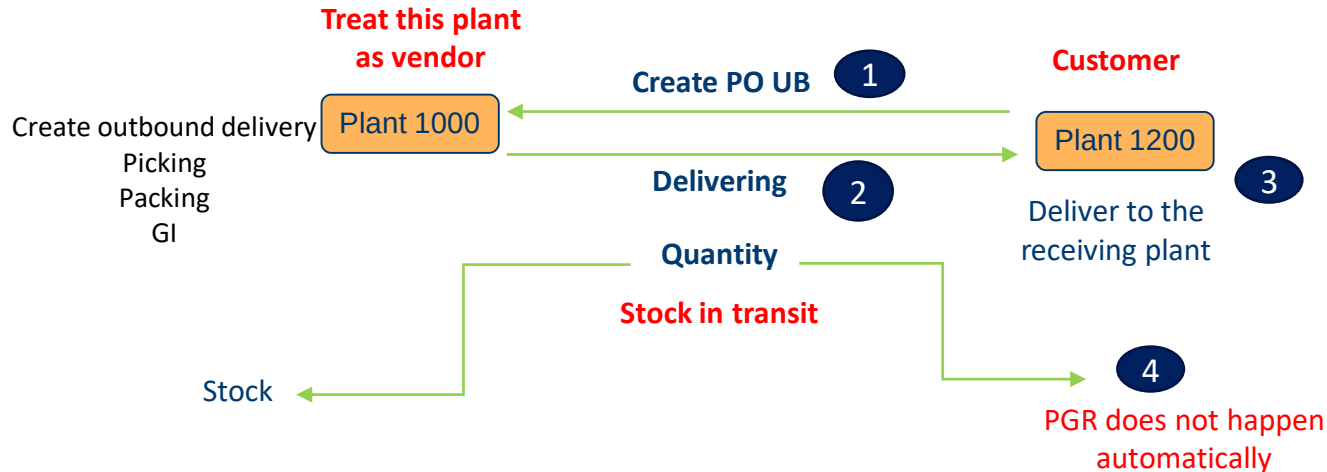

No notion of invoicing

- **Stock Transfer Intra-Company in two Steps**

Stock Transfer Intra-Company in two Steps

Prerequisites:

- Plants should belong to the same company code
- No need for logistics: shipping, good issue, good receipt should be handled implicitly.
- This process is instantaneous
- Stock in transit

Stock Transfer Intra-Company in two Steps

Define item categories in deliveries:

If you set the indicator for the one-step procedure, the goods receipt is posted in the receiving plant at the same time as the goods issue is posted from the issuing plant.

- ▼ Purchase Order
 - Define Number Ranges
 - Define Document Types
 - Set Tolerance Limits for Price Variance
 - Release Procedure for Purchase Orders
 - Define Screen Layout at Document Level
 - Texts for Purchase Orders
 - Define Tolerance Limit for Archiving
- ▼ Set up Stock Transport Order
 - Define Shipping Data for Plants
 - Create Checking Rule
 - Define Checking Rule
 - Assign Delivery Type and Checking Rule
 - Assign Document Type, One-Step Procedure, Underdelivery Tolerance
 - Restrictions for the Industry Solution for Defense Forces & Public Security
 - Set Up Stock Transfer Between Storage Locations

In the example, one step is **unchecked**. The good receipt into the receiving plant is processed through the MIGO transaction and based on the Outbound Delivery.

Shows whether the underdelivery tolerance for the stock transfer order is taken into account when the goods issue is posted

■ **Stock Transfer Cross company
with Delivery and Billing
Document/Invoice**

Cross Company STO

Prerequisites:

- Plants should belong to different company code
- No need for logistics: shipping, good issue, good receipt should be handled implicitly.
- This process is instantaneous
- Stock in transit

Cross Company STO

Definition:

In the intercompany transfer flow, a company code in SAP buys from a partner company using the same SAP.

Only the purchase document is required.

The delivering company does not need to create a sales order.

In this configuration, it is then possible to create an **outbound delivery** directly in reference to the purchasing document .

The internal invoice is processed based on the delivery.

Cross Company STO

Supplier Definition:

The buying company is created as a supplier (company and purchase views).

In the example: the company ZICO buys from the company ZZICO5211.

In the additional purchasing data, the supplying plant must be assigned to the supplier:

Here assignment of plant 5211 is attached to company ZZICO5211.

With this option, when purchase order is created with this supplier, the system activates the data for the inter-company transfer

The screenshot displays the SAP 'Display Vendor: Purchasing data' interface. The main window shows the vendor 'ZZICO5211 JABIL VIETNAM COMPANY LTD' with the location 'Ho Chi Minh City' and the purchasing organization 'ZICO InterING Group-Regio'. The 'Conditions' section includes fields for 'Order currency' (EUR), 'Terms of paymnt' (DEC4), 'Incoterms', 'Minimum order value' (0,00), 'Schema Group, Vendor' (ZI Interco vendor), 'Pricing Date Control' (No Control), and 'Order optim.rest.'. A secondary window titled 'Display Vendor: VSR-/Plant Relev.' is open, showing the same vendor information and a 'Plant assignment' section where '5211 JABIL VIETNAM' is assigned. Below this, the 'Possible data maintenance levels' section shows two options: 'Data retent. at VSR level allowed' and 'Data retent. at plant level allowed', both with checkboxes.

The delivery type for intercompany transfers follows the same rules as for other outbound deliveries.

As there is no sales order, SAP uses the Order / Default Type associated with it to generate the delivery via the copy control.

Cross Company STO

Sales document type

Change View "Maintain Sales Order Types": Overview

New Entries

SaTy	Description	Block
DL	Order Type Sched.Ag.	X

The sales document type is blocked (no order entry). It is necessary to determine delivery and invoicing.

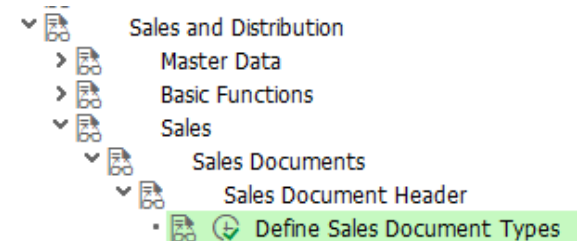

The copy control from sales doc to delivery remains technically necessary and is done according to the default document type

Change View "Assign Schedule Line Categories": Overview

ItCa	Typ	SchLC	MSLCa	MSLCa	MSLCa
NLC		NC			

The type of schedule line for intercompany transfer has its own exit movement codes:
Movement code: 643 for the inter-company goods issue. Allows monitoring of stock in transit once the goods issue is processed and called the goods receipt in the receiving plant

The assignment of the schedule line type is maintained as in sales documents

Cross Company STO

Delivery item category determination

As in sales documents, the item category is determined according to the document type (here delivery) and the item category group.

In the case of the stock transport order, the determination is made using the use case V specifically defined in SAP.
V is linked to purchase order.

Delivery item category determination

Cross Company STO

Flow description

Once the delivery has been created and the goods issue has been completed, the internal invoice will be eligible in the VF04 transaction.

The good receipt into the receiving plant is processed automatically (one step procedure) or through the MIGO and based on the Outbound Delivery (two steps procedure)

Document Flow

In the history of the transfer order are then available:

- The delivery
- The goods issue document
- The goods receipt document /Receipt invoice

From the outbound delivery we can also see:

- The transfer order
- The Internal SD invoice
