- Step 3: Purchase Order – Convert purchase request
Purchase Order – Create direct purchase order without purchase request
Purchase Order – Release strategy
- Step 4: Purchase order goods receipt

➤ Purchasing KPI & Monitoring

➤ Customizing: The steps

- Step 1: Purchasing order type creation

INTRODUCTION

➤ Cette formation à pour objectifs:

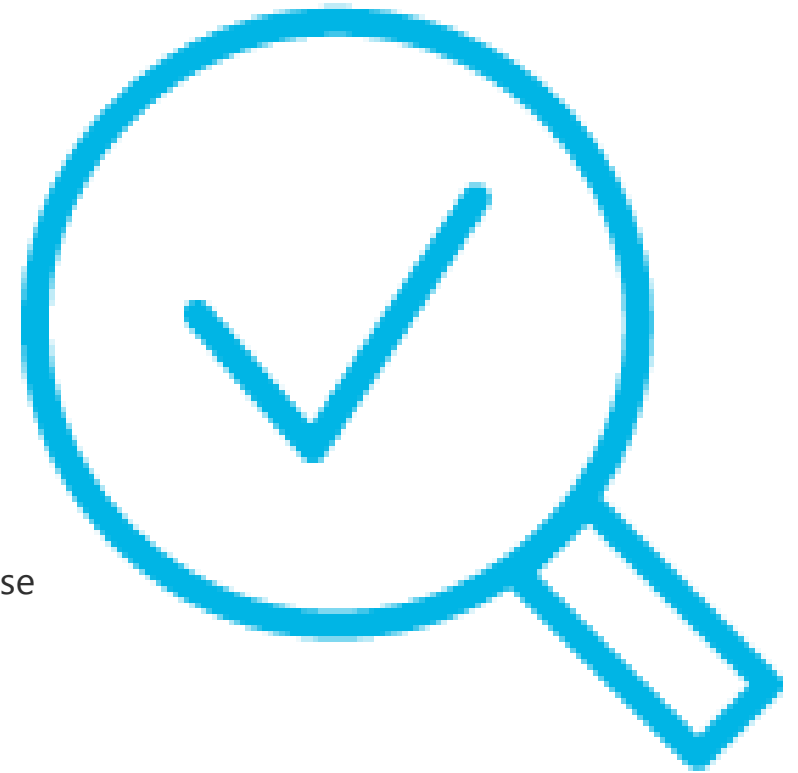

- Explain the context of a direct purchase flow
- To illustrate a standard case
- Explain the different stages of the flow

➤ **Rappel:**

- **Direct purchase:** This purchasing category includes raw materials, components (parts and sub-assemblies) entering into the composition of finished products. They are incorporated into the direct costs of manufacturing sold.
- **Indirect purchasing:** They include supplies used in the day-to-day of organizations, but not entering the production process. Example:

Provision of services: vehicle rental, transport and travel costs, maintenance of premises and green spaces, telephony, etc.

- ✓ Intellectual services: consulting, accounting expertise, outsourcing...
- ✓ Consumables of all kinds: administrative supplies, office automation, reprography...
- ✓ Investments (excluding production): immovable, computer science...

STANDARD FLOW

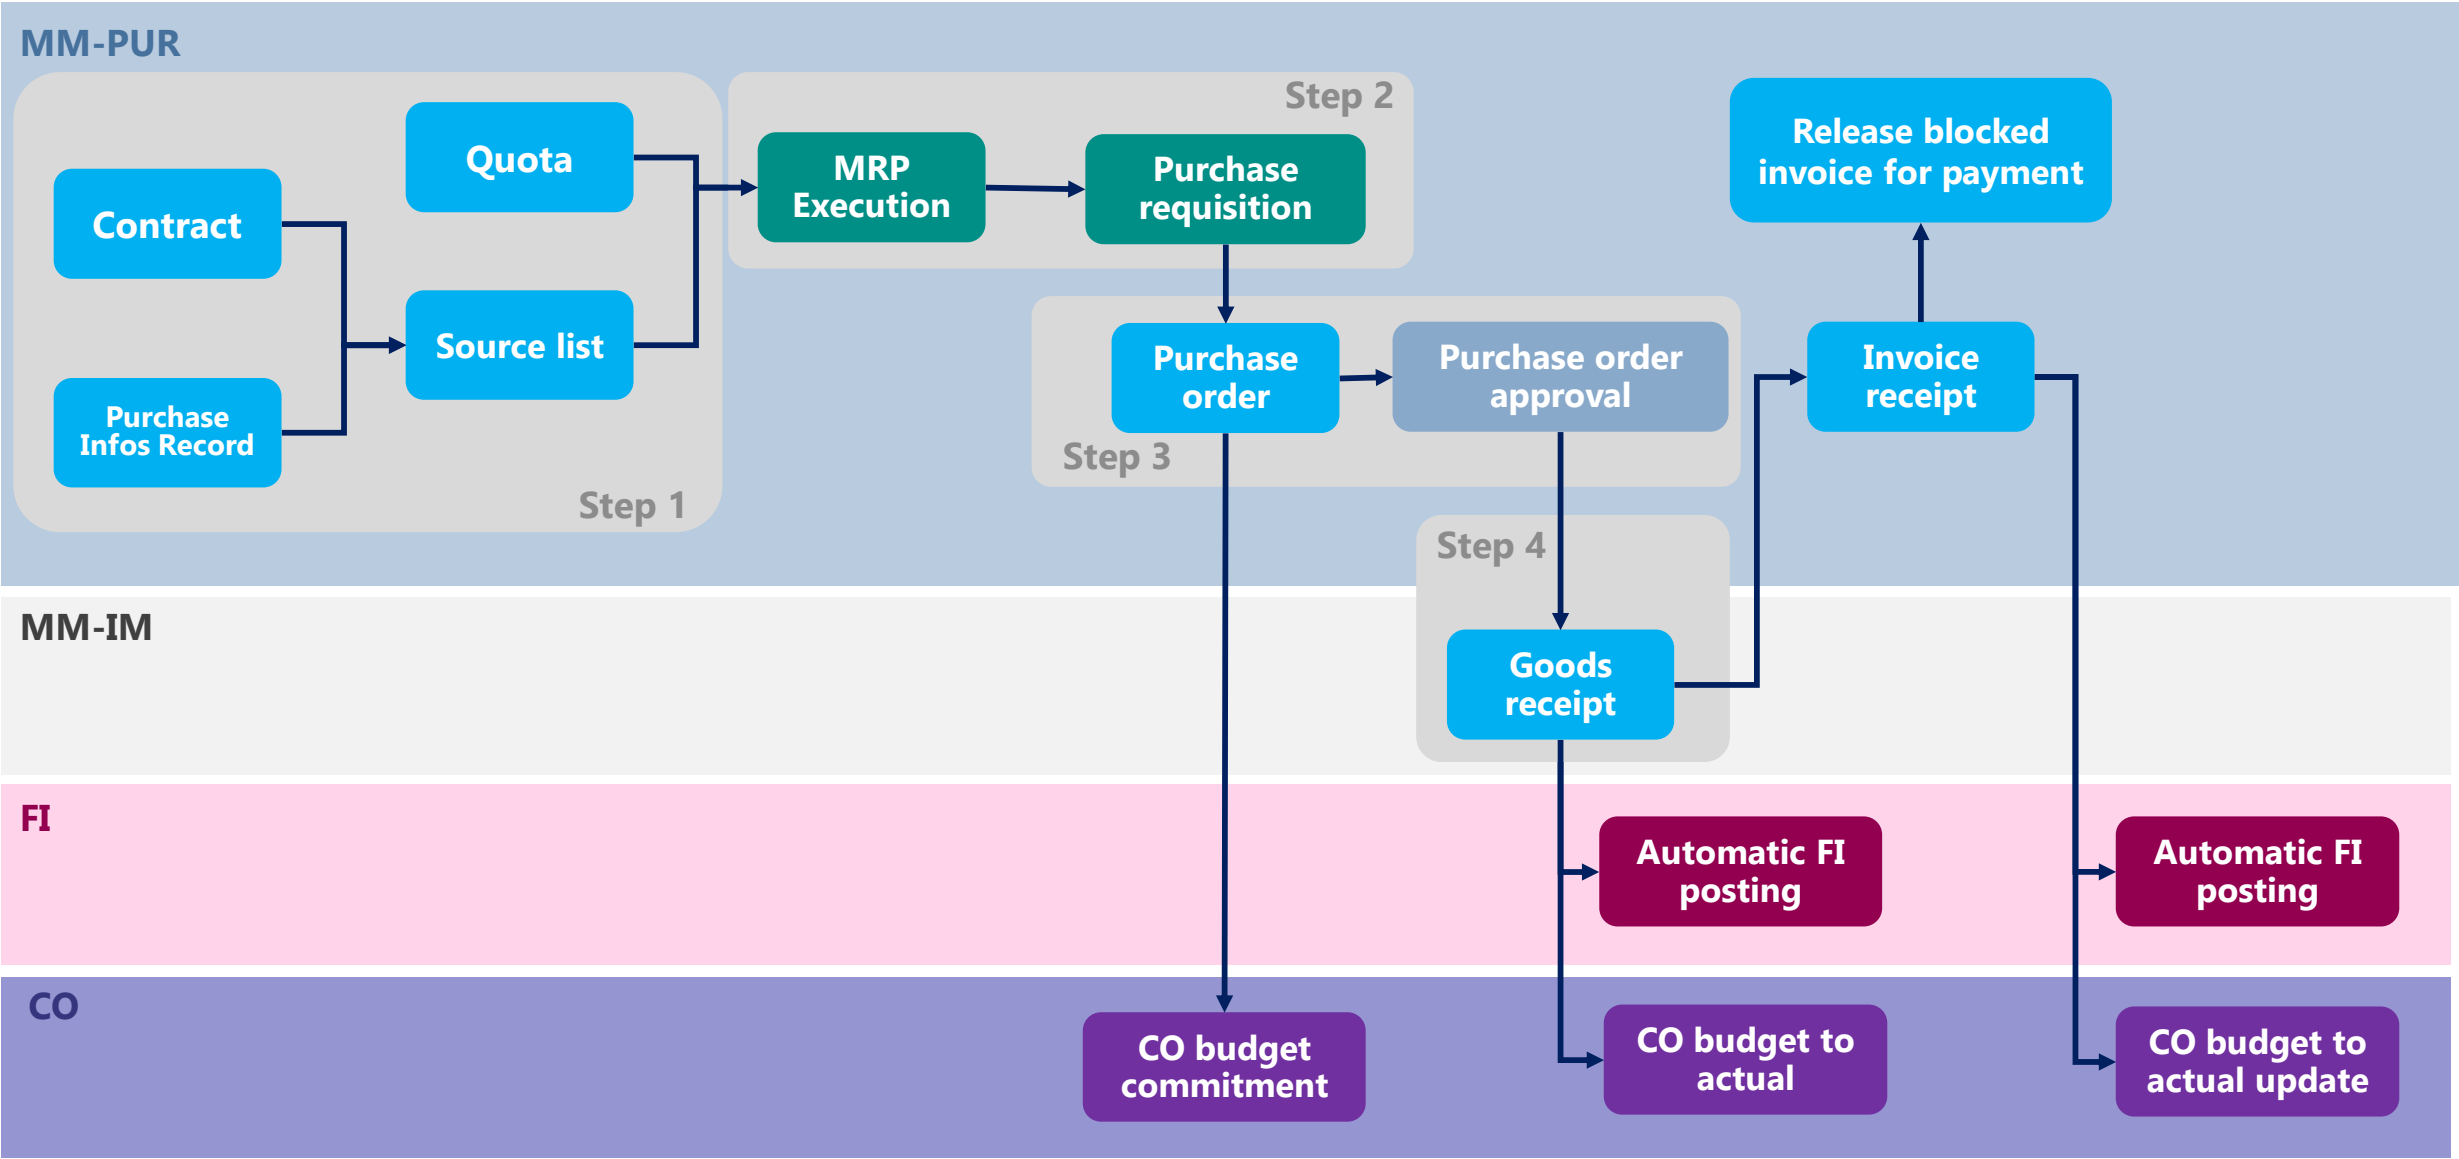

STANDARD FLOW

Presentation

- **Direct purchasing stands for any purchasing which is included in a BOM or sell to a customer**
- The tasks Purchasing team is in the "MM" component SAP. Mains points are :
 - External procurement of materials automatically created from MRP
 - Determination of possible sources of supply for a requirement identified by the materials planning and control system or arising directly from a user department
 - Monitoring of deliveries from vendors
 - Invoice verification
- The tasks awaiting from purchasing team
 - Posting the material group
 - Posting pricing values, quotas (% of repartition), source list (wich supplier we'd like to work with, Notation (Monthly & annual one), Risk calculation
- Direct purchasing order must have a purchasing order type defined in the customizing with/without release strategy

STANDARD FLOW

Direct purchasing standard SAP flow

STANDARD FLOW

Step 1: Master data (1/4) – Purchasing contract overview

- To display a purchase contract, launch **ME33K** (ME31K to create, ME32K to modify)
- To create a contract, fill in the following information:
 - The supplier, the date of creation, the type of contract (MK: type « in quantity » will be preferred; WK : type « in value »)
 - The purchasing organization, the purchasing group
 - Then inform the company, and an expiry date
- Then at post item, enter:
 - Account assignment, item, quantity, net price, plant and storage location (if item stored)
 - Then, click on save
- For the contract / FIA: **The prices are not updated when the contracts are modified.**

A contract is a longer-term agreement with a vendor (one of the two forms of “outline agreement” in the SAP system) to supply a material or provide a service for a certain period of time. When creating a contract, you can choose between the following contract types:

Value : The contract is regarded as fulfilled when release orders totaling a given value have been issued. Use this contract type in sap when the total value of all release orders should not exceed a certain amount

Quantity: The contract is regarded as fulfilled when release orders totaling a given quantity have been issued. Use this contract type when the total quantity to order over the duration of the contract is known.

- It is important to note that when creating your contract, information is imported from the supplier file and the item file to complete it.
- However, the fields in but not grayed out can be modified.

Item	I	A	Material	Short Text	Targ. Qty	OUn	Net Price	Per	OPU	Mat. Grp	Plnt	SLoc	D	Stock Segment	T...
10			100090036500	ACC CETHI E/S AIR MUR ME...	10 000 000	PC	7,601	1	PC	D2125	1003	XX02			

STANDARD FLOW

Step 1: Master data (2/4) – Purchasing info record overview

➤ The FIAs prices are updated when a new order is placed.

- Technically when a new order is placed the reference (order No. + item) is updated in the purchasing info sheet table.
- We configure a job that compares the price of the FIA and the price of the last order in the tables (RM06INP0)
- The « Update purchase info » box in the « item data » tab must be active in the purchase order to update the latter according to the order

➤ To access the purchasing info record: launch transaction **ME13**. Then inform in the supplier, the article, the purchasing organization, the plant and the FIA number

This screenshot shows the 'Item Data' tab in a SAP purchase order. The item is '1 [10] 100090036500, ACC CETHI E/S AIR MUR MET...'. The 'Material Data' sub-tab is active. Fields include: Material group (D2125), Supplier Mat. No. (REF FOURNISSEUR 1603), Supplier Subrange, Batch, Revision level, EAN/UPC (3546339003659), Supplier Batch, and Commodity Code (85169000). A callout box at the top right says 'Available at item level of the purchase order'. A red box highlights the 'InfoUpdate' checkbox, which is checked.

This block contains three screenshots illustrating the steps to access the purchasing info record (ME13):

- 1. Display Info Record: Initial Screen**: Shows the initial input screen for transaction ME13. Fields for Vendor (10007347), Material (100090036500), Purchasing Org. (B004), Plant (1003), and Info record are highlighted with red boxes.
- 2. Display Info Record: General Data**: Shows the 'General Data' tab of the info record. Fields include Info record (5300026830), Vendor (10007347), Material (100090036500), Material Group (ACC CETHI E/S AIR MUR METAL DIA160), and Material Subrange (Trading fresh goods). A red box highlights the 'Purch. Org. Data' tab.
- 3. Display Info Record: Conditions**: Shows the 'Conditions' tab. Fields include Net Price (0,00 EUR), Effective Price (0,00 EUR), and Valid to (31.12.9999). A red box highlights the 'Auto. Supp.' checkbox, which is checked. A callout box at the bottom right states: 'This check must be activated for the FIA data to be taken over when converting DA>PO'.

STANDARD FLOW

Step 1: Master data (3/4) – Manage Source list (1/2)

- MM module offer several options to determine the most appropriate source to meet a request: for this, the supply source list is used, which corresponds to the ability of suppliers to offer items and services.

- ✓ Low cost
- ✓ High quality
- ✓ In the agreed timelines

- This supply source list is set on previous orders, long-term purchase contracts, etc

The screenshot shows the 'Display Source List: Overview Screen' in SAP. It displays the material '100090036500' (ACC CETHI E/S AIR MUR METAL DIA160) for plant '1003' (PROD - ST LOUIS). Below this, a table titled 'Source List Records' shows two records for the same material and plant, both valid from 01.01.2018 to 31.12.2999. The records list vendors 10007367 and 10007368, both with POrg B004, OUn PC, and Agmt 4600001029 and 4600001030 respectively. The table also includes columns for Central Contract, Central Contract, Fix, Bk, MRP, and MRP Area.

Valid from	Valid to	Vendor	POrg	PPI	OUn	Agmt	Item	Central Cont...	Cent. Contra...	Fix	Bk	MRP	MRP Area
01.01.2018	31.12.2999	10007367	B004		PC	4600001029	10		0	☐	☐	1	1003
01.01.2018	31.12.2999	10007368	B004		PC	4600001030	10		0	☐	☐	1	1003

- The source list is used in the administration of sources of supply.
- It specifies the allowed (and disallowed) sources of a material for a certain plant within a predefined period. Each source is defined by means of a source list record. To access it, start. The transaction **ME03**.
 - Once the report started, you can see all the sources of supply. For an article on a given plant.
- It is important to note that while there are multiple sources of supply. Then the system will choose the source according to the quotas.

STANDARD FLOW

Step 1: Master data (3/4) – Manage Source list (2/2)

- To generate the source list, launch **ME01** and fill the item and the plant.
 - Click on the white/red icon 
 - Check that the supplier, contract, position and plant are well informed
 - Also check the validity dates
 - Then click on save
- To modify sources lists, you simply have to regenerate them.

Maintain Source List: Overview Screen

STANDARD FLOW

Step 1: Master data (4/4) – Manage Quota arrangement (1/2)

- Quota arrangement divides the total requirement of a material among certain sources of supply
- It is possible to see the quotas of an article on a given plant via the transaction **MEQ3**
 - Fill material, plant and validate.
 - In the new screen click on « item » to access quotas at item level.
 - ✓ In this example, we notice : three lines with 3 different suppliers. Each supplier is assigned a quota (in %) the system will then choose the supplier according to the quotas.
 - ✓ This process aims to secure purchases, by diversifying the sources of supply in the event of default by one of them. Indeed, if a supplier who represents 80% of a approvals on this reference are very seriously threatened.
 - ✓ The « allocated quantity » column represents the quantity that the supplier has already delivered.

STANDARD FLOW

Step 1: Master data (4/4) – Manage Quota arrangement (2/2)

➤ To create a quota, start the **MEQ1** transaction (same transaction for modification)

- Inform article and the plant
- Specify a validity period and a minimum batch quantity

➤ Then, select the line and click on « item »

- Enter the name of vendors and the assigned allocated quantity to them. Click on Save.
- Quota arrangement is now maintained for the particular material.

STANDARD FLOW

Step 2: MRP Execution (1/2) - calculation MRP customizing (1/4)

➤ To launch the MRP, use the transaction **MD01**, (the **MD02** will be preferred if you want to execute this last individually) It is possible to directly generate Das via the MRP or to go through planned orders

➤ **The MRP type determines for which materials planning should ne performed:**

- Calculation of regenerative requirements (**NEUPL**), the system plans all the articles contained in the MRP file, without any filter.
- Requirement Calculation by Variance (**NETCH**), The system plans only those materials that have undergone significant changes for the planning of component requirements since the last planning.

• Note: The NEUPL setting can only be used at the plant level, not for an individual MRP in the article.

• **We recommended taking NEUPL because S4HANA is fast in computing time.**

➤ **Purchase requests :**

- **1 DA:** the system enerates purchase requests in order to cover the need.
- **2 DA in the supply horizon** (delivery time+ opening horizon (time allocated to transforming the DA into a pruchase order), beyond that he creates planned supply orders
- **3 Planned supply orders:** Only create planned supply orders over the entire horizon and not Das.

Step 2: MRP Execution (1/2) - calculation MRP customizing (2/4)

[Look PP univeristy document](#)

➤ The deadlines of the delivery program:

- **1:** even if there is a valid delivery schedule setting for the reference, the system does not generate a deadline on thhe delivery schedule (The system will propose a DA)
- **2:** The system proposes deadlines on the opening horizon for each item (supply horizon)
- **3:** The system offers deadlines over the entire horizon

• **We recommended setting 3**

➤ MRP lists (photo of the result of the calculation):

- **1:** The system generats list for all the articles processed as part of thhe MRP calculation
- **2:** The system generates an MRP list only if there are exception messages (all of items with no message do not appear in the list)
- **3:** The system does not generate any MRP list (for any material)

• **We recommend setting 1**

The screenshot shows the SAP MRP customizing interface. Two red boxes highlight specific settings, with red lines connecting them to callout tables.

Callout 1: Schedule lines Short Descript.

	Short Descript.

STANDARD FLOW

Step 3: Purchase Order (1/3) – Convert purchase request (1/2)

➤ Once the planned order has been converted to a purchase request, this purchase request must be converted into a purchase order. For this, we use transaction **ME59N**.

- Inform the purchasing organization, the supplier and the plant
- Check « By company code » and/or « by contract » (you can choose another PO generation option suchh as by plant, purchasing group, or delivery date for example...)
- It is possible to generate Pos directly with the numbers of Das or sales orders. To do this, inform the numbers in the appropriate fields.
- And click on execute.

- **CAUTION:** It is preferable to activate the « Test Run » box first in order to avoid errors such as the the generation of ALL DAs on a plant and/or company !
- This transaction can therefore be particulary dangerous.
- Once the manipulation has been verified then remove the check box.

- **TIP:** If the PO generation fails, it is possible to create the PO manually from the purchase requisition in ME21N. In this way the system will send error messages preventing the automatic conversion to ME59N

STANDARD FLOW

Step 3: Purchase Order (3/3) – Release strategy

➤ Once the purchase order has been generated, if the purchase order is subsequently approved (by transaction **ME29N** & **ME28**) by the validator (see the training on **Release Strategy**) then the following actions are taken:

- Sending the order to the supplier (see message in the purchase order)
- Order receipt
- Invoicing of the order

➤ In the purchase order you can check the launch status

- Then consult the message to see if everything has been generated.

STANDARD FLOW

Step 4: Purchase order goods receipt

➤ To receipt the purchase order, launch the transaction **MIGO**

- Select the action to take. Here **A01** goods receipt + **R01** Purchase Order (movement code **101**)

- Then, enter the code of the purchase order to be received.

- At post level:

- ✓ Specify the quantity to be received in the « Quantity » tab.

- ✓ Check « Item OK » on all the sets to receive

- ✓ Then click on save

- ✓ It is possible to make partial reception of the order

- ✓ A N° of material document will be generated

- In the « Where » tab.

- ✓ You can modify the movement code

- ✓ Change the storage location

- ✓ Define the type of stock of the goods to be received

- ✓ Add a comment

➤ It is possible to carry out a control by clicking on « check » in order to verify the entry

The number **102** corresponds to a receipt cancellation or a good issue

The screenshot displays the SAP MIGO transaction interface. The title bar reads 'Goods Receipt Purchase Order 4500022271 - NICOLAS JEULIN'. The top navigation bar includes 'Show Overview', 'Hold', 'Check', 'Post', and 'Help'. The main header shows 'A01 Goods Receipt' and 'R01 Purchase Order' with the purchase order number '4500022271'. The 'GR goods receipt' field is set to '101'. The 'General' tab is active, showing 'Document Date' and 'Posting Date' as '22.09.2020', 'Vendor' as 'GETBA', and 'HeaderText'. Below this is a table with columns: Line, Material, Mat. Short Text, OK, Qty in Unit, ELN, Plant, Cost Center, Stor., Sloc, G/L Account, Batch, M., D Stock Type, and Purchase order. Line 1 is highlighted with material '990000000010' and quantity '998'. The 'Quantity' tab is selected, showing 'Qty in Unit of Entry' as '50', 'Qty in SKU' as '50', 'Qty in Delivery Note' as empty, and 'Quantity Ordered' as '998'. The 'Where' tab is also shown, with 'Movement type' set to '101', 'Stock type' as 'Unrestricted-Use', 'Plant' as 'PROD - FONTAINE', and 'Storage location' as 'USINE'. At the bottom, the 'Item OK' checkbox is checked.

✓ Material document 5000037455 posted

STANDARD FLOW

Step 4: Purchase order goods receipt

- Once the order has. Been received, you must check the delivery « delivery complete » box in the PO.
- We can see the appearance in the purchase order of a tab at item level « Purchase Order History » which lists all the stock movements related to the PO
 - In this way, we can know how much delivery the PO has made.
 - Whether the quantity is fully delivered or not.

The screenshot displays the SAP Purchase Order (PO) 4500022070. The main window shows the 'Delivery' tab for item 1 [10] 100090036500, ACC CETHI E/S AIR MUR MET. The 'Delivery' tab is highlighted in red. The 'Purchase Order History' tab is also highlighted in red. The 'Purchase Order History' table shows the following data:

PURCHASING KPI & MONITORING

FIORI – Overdue purchase order items

- Allows you to analyze spending over the last 365 days
- The analysis criteria are as follows:
 - Provider
 - Group of Goods
 - Buyer group
 - plant
 - account assignment
 - Document (Purchase order)

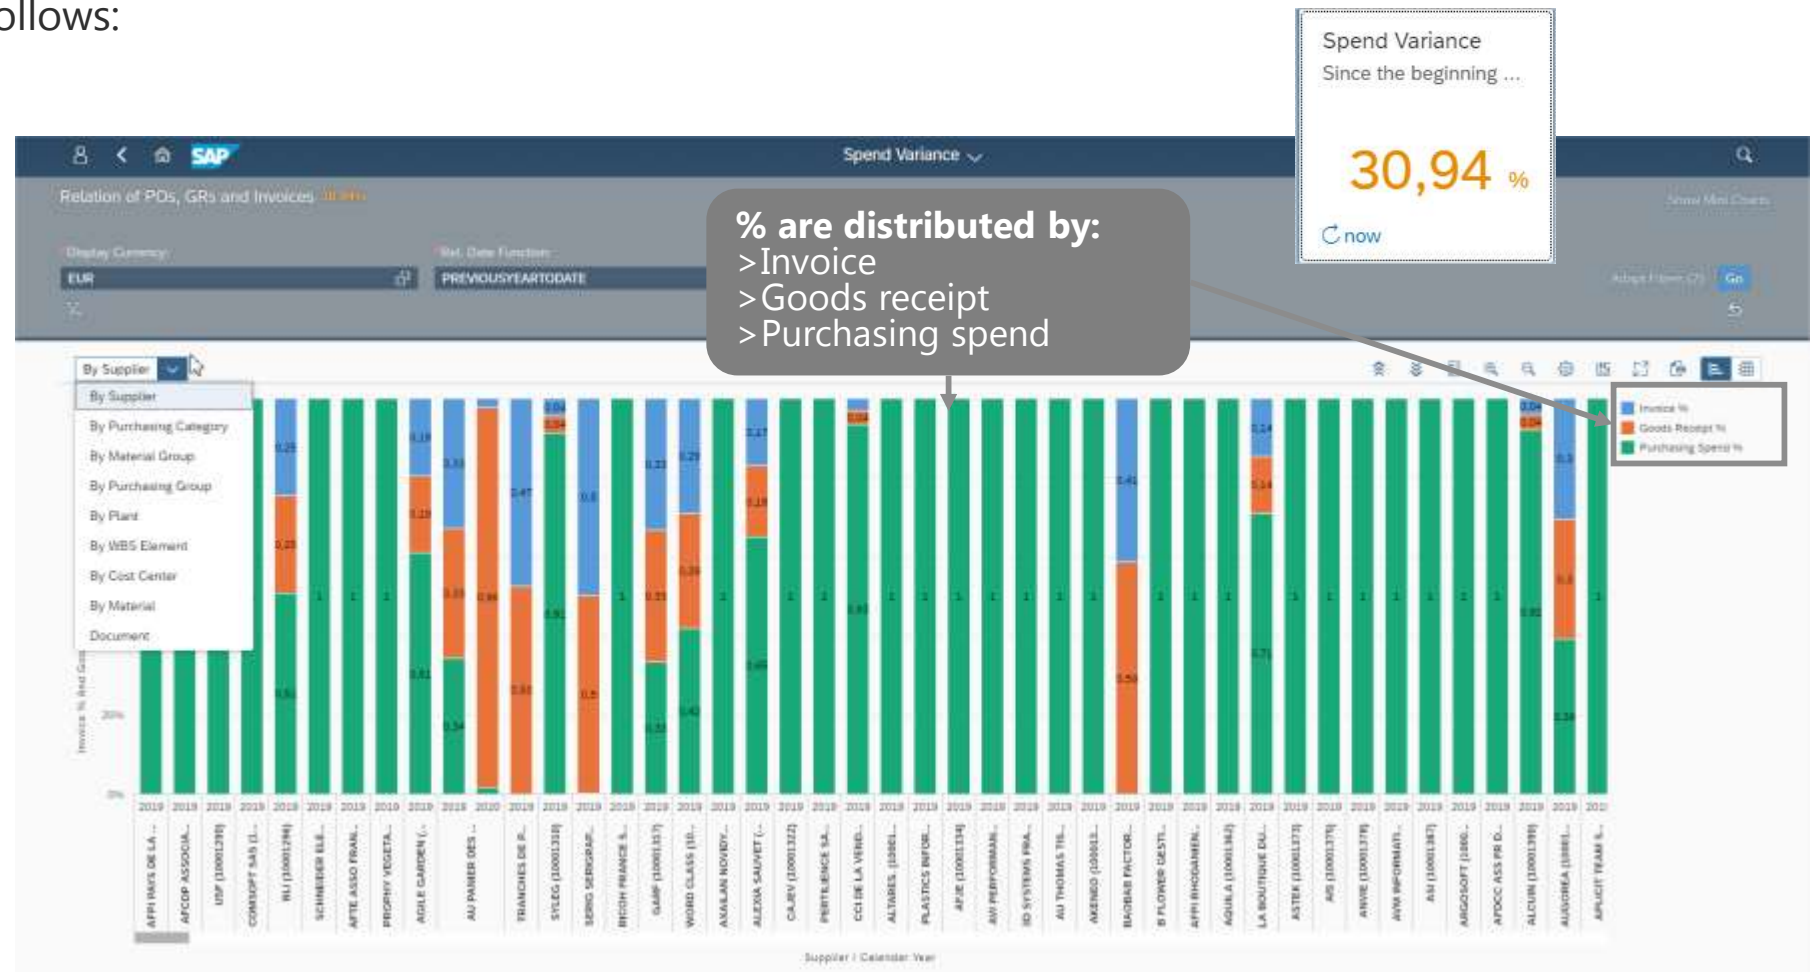

PURCHASING KPI & MONITORING

FIORI – Spend variance

➤ Allows you to analyze the progress of expenses for the last 365 days.

➤ The analysis criteria are as follows:

- Provider
- Group of Goods
- Buyer group
- plant
- account assignment
- Document (Purchase order)

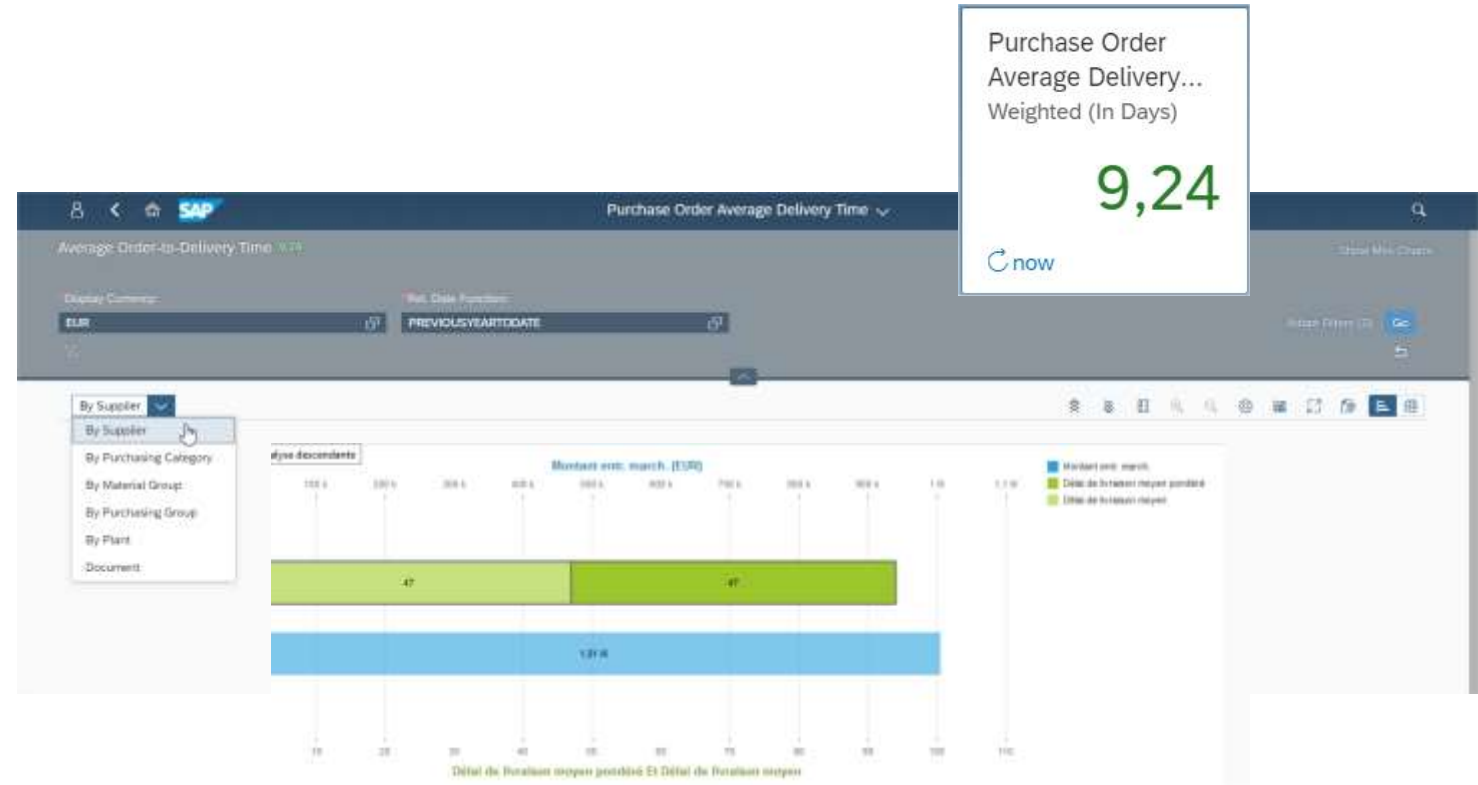

PURCHASING KPI & MONITORING

FIORI – Purchase order average delivery time

➤ Allows you to analyze the average time and the weighted average time of delivery of goods.

➤ The analysis criteria are as follows:

- Provider
- Group of Goods
- Buyer Group
- plant
- Document (Purchase order)

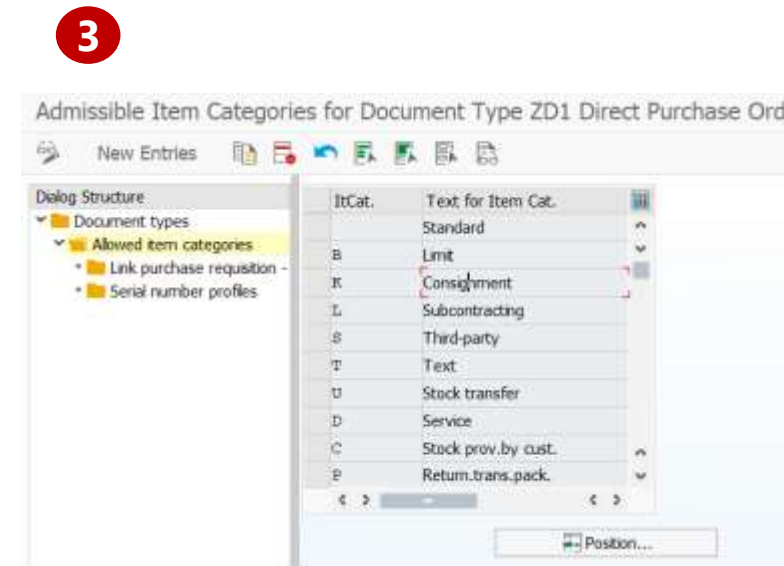

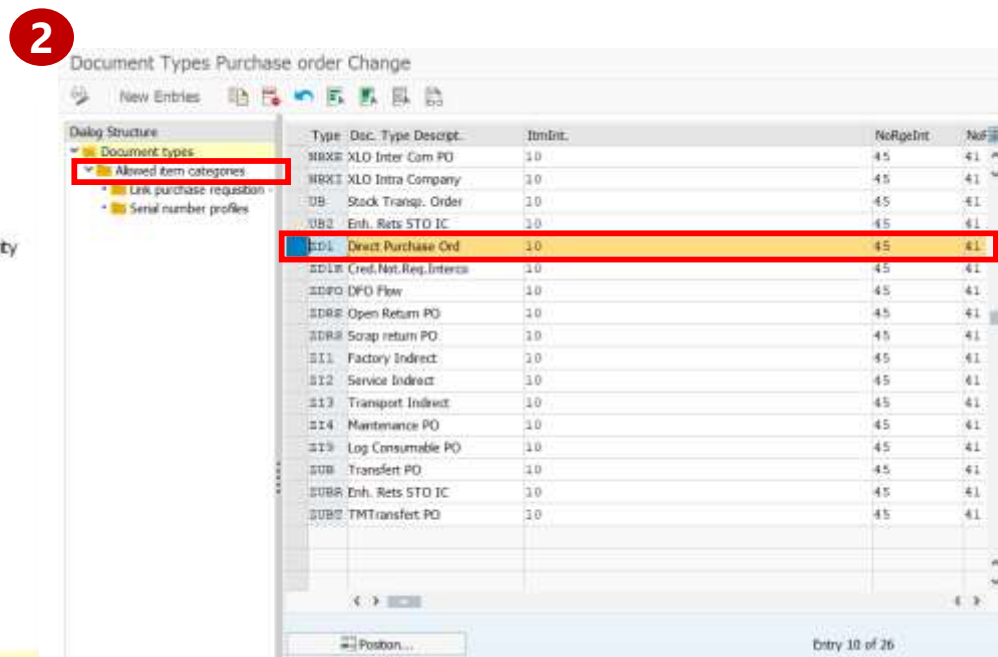

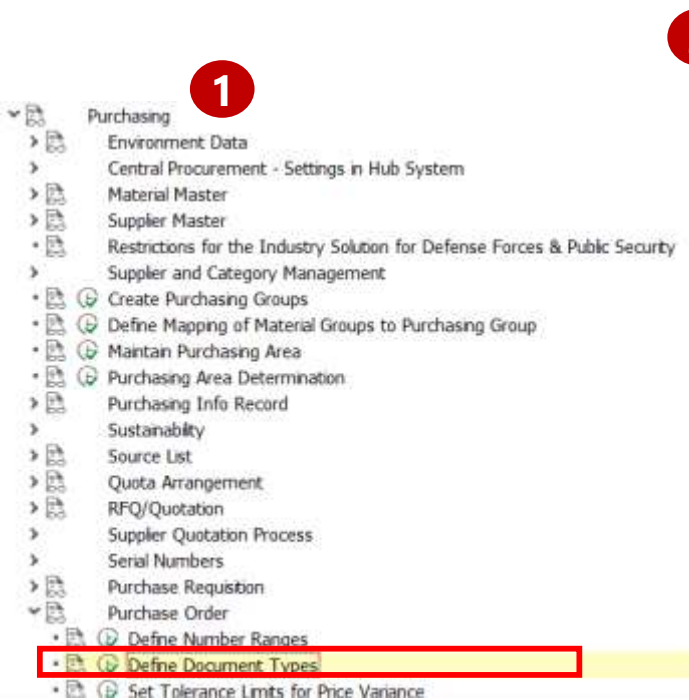

CUSTOMIZING: THE STEPS

CUSTOMIZING: THE STEPS

Step 1: Purchasing order creation type (1/2)

- In **SPRO** follow the following path: Materials management > Purchasing > Purchase order > Define document types
- From this point we can create / copy types of purchasing documents (validation strategies will be wired on these)
 - For each type of order, we can define the workstation intervals, intervals, internal and external number ranges, zone option keys ...
 - It is also possible for each type of document, to define the types of positions concerned (**globally we do not touch this information**)

CUSTOMIZING: THE STEPS

Step 1: Purchasing order creation type (2/2) – link purchase order / purchase request

- Then, in the next screen, we can associate the types of purchase requests with the types of purchase orders
- This setting point is to be completed in the event that you wish to assign a particular type of purchase order
 - Conversely, do not put anything.

- Number ranges which are assigned in purchasing documents (orders, contracts) are configured in this screen.
- We assign column 1 in the purchasing documents and here we assign the number ranges.
- For purchase requisitions, the interval types work the same.

Step 4: Conditions for Output control in NACE

- PO messages are determined in the **NACE** transaction via the EF application
 - Select the desired message
 - Then select the key combination
 - ✓ Here: « Purchasing Output determination: document type »
 - Finally, enter the type of PO and validate
 - The conditions for launching the message are then accessed
